Program V

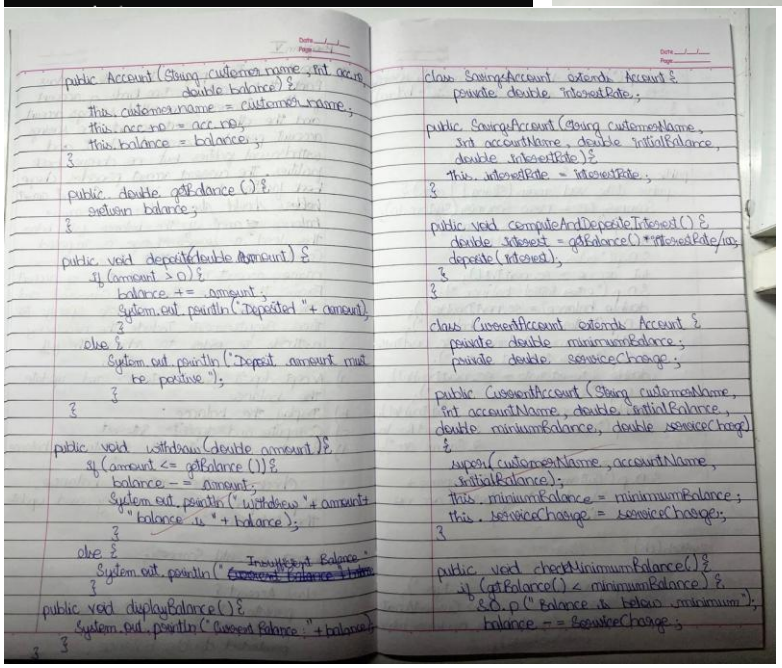
Q. Develop a Java pgrm to create a class Bank that maintains two kinds of account for its customers, one called savings account and the other current account. The savings account provides compound interest and withdrawal facilities but no cheque book facilities. The current account provides cheque book facilities but no interest. Current account holders should also maintain a minimum balance and if the balance falls below this level a service charge is imposed Create class Account that store customer name, account number and type of account Fromm this derive the class Cur-acct and Sav-acct to make them more specific to their requirements. Include the necessary methods in order to achieve the following tasks:

a) Accept deposit from customer and update the balance
b) Display the balance
c) Compute and deposite interest
d) Permit withdrawal and update the balance

Check for the minimum balance, impose penalty if necessary and update the balance

```
import java.util.Scanner;

class Account {
    private String customer name;
    private int acc no;
    perotected double balance;
```



```
public Account (String customer name, int acc no,
                double balance) {
    this.customer name = customer name;
    this.acc no = acc no;
    this.balance = balance;
}

public double getBalance () {
    return balance;
}

public void deposit(double amount) {
    if (amount > 0) {
        balance += amount;
        System.out.println("Deposited " + amount);
    }
    else {
        System.out.println("Deposit amount must
            be positive");
    }
}

public void withdraw(double amount){
    if (amount <= getBalance ()){
        balance -= amount;
        System.out.println("Withdrew " + amount+
        " balance is " + balance);
    }
    else {
        System.out.println("Insufficient Balance");
    }
public void displayBalance(){
    System.out.println("Current Balance: " + balance);
}
}
```

```
